## Computerized Visual Field Analysis & Optomap® Digital Retinal Scan

Annual eye exams are vital to maintaining your vision and overall health. Associates in Eyecare is proud to offer the latest technological advancements in comprehensive eyecare as an important part of your comprehensive eye exam:

- Visual Field Analysis

The visual field analyzer, a highly sophisticated computerized instrument, electronically measures retinal and neurological function. This measurement can assist us in the early detection of many ocular and systemic disorders. These include brain tumors, lesions, glaucoma, diabetic retinopathy and retinal detachment. This painless screening test takes just minutes to complete.

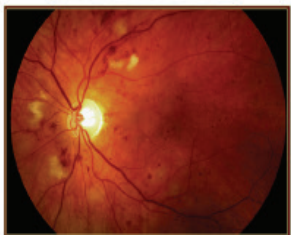

- Optomap® Retinal Scan

The Optomap® Retinal Scan produces images that provide the doctors with a wide view to look at the health of your retina which further aids in detection and prevention of retinal pathology. Diseases such as Macular Degeneration, Glaucoma, retinal tears or detachments, and other health problems such as diabetes and high blood pressure can now be seen without dilation for most patients. The scan is fast, easy, and comfortable for all ages.

These tests are especially important if you have:

- History of headaches
- History of seeing spots or flashes of light
- Personal or family history of diabetes, high blood pressure, Glaucoma, Macular Degeneration or retinal detachments
- History of spots or “freckles” in the eye
- History of circulatory/cardiovascular problems
- Strong eyeglass/contact lens prescription
- Or wish to be preventive about eye disease

There is an additional fee of \$30 for the screening visual field exam and \$30 for the Optos digital retinal scan (not covered by insurance). If both are performed, the fee is \$49, which is an \$11 savings.

Our doctors strongly recommend the Optomap® scanning technology to all patients no matter what age.
